

GECCO-2004

Evolutionary Computation in Industry (ECI) Track

For the third year, GECCO in 2004 had a series of sessions entitled "Evolutionary Computation in Industry". The Evolutionary Computation in Industry sessions were tutorial-style and presenters were invited, but all GECCO participants were invited to attend. The ECI sessions were on June 28-30 (Monday - Wednesday) during the main part of GECCO conference.

Each session focused on a different topic related to applications of evolutionary algorithms. The presentations were designed for attendees such as managers, technology scouts, and industrial practitioners, who are seeking less technical presentations on the ways that evolutionary applications can make a difference. Presenters in these sessions were experts in applications and in describing the way that good evolutionary computation projects are planned and executed.

The Evolutionary Computation in Industry sessions were organized by
--- David Davis (NuTech Solutions) david.davis@nutechsolutions.com
--- Rajkumar Roy (Cranfield University) r.roy@cranfield.ac.uk
--- Mark Jakiela (Washington University in St. Louis) mjj@wustl.edu
